

NEXT LEVEL OF
VIDEO
SURVEILLANCE

Obseron 3 contains a lot of much-needed features. It is faster and lighter than before. Obseron's own artificial intelligence increases the reliability of the recording and enables more accurate alarms. By removing direct compatibility with the version 2, the 3 has experienced major internal improvements that make it more stable and future-proof.

AI

Obseron AI

An excellent way to add smart features to any video stream. High efficiency keeps your recorder running even with multiple AI instances in use. Obseron AI now detects people and vehicles. Detection of other objects and object tracking coming later. Licensed separately. Windows only.

8 x more cameras

Utilizing the lightness of secondary stream for most tasks, Obseron can now handle up to 8 times more cameras. The main stream can be raised to high resolution and frame rate. Tested on 32 Full HD cameras and an Intel i3 computer.

Login server

Centralized user management is now easier than ever. Add all users to one server and set the other servers to use the same as the login server.

Pre-recording

Never miss a moment with adjustable pre-and past-recording.

Obseron Blur Studio

A new AI powered tool to blur people in exported video. It automatically detects and blurs the people in footage. Final touch-ups for blurred areas can be made with a brush and eraser tools.

Ubuntu support

From now on, Obseron will also get versions for Ubuntu LTS.

Other new features

- Installation wizard
- Improved UI
- User selectable recording path
- New POS features

Updating from Obseron 2

Can be done in a few extra steps. License keys must be changed for version 3 keys. The upgrade is free if the license was acquired in 2021 or 2022. Contact sales for more information.

Version 3 compatibility

Obseron 3 clients work with version 2 servers, but not the other way around. Version 2 support will work until the end of 2023.

Easier licensing

The upgrade licenses are now the same as the basic camera licenses, so you no longer need to know if the license is for a new recorder or whether it adds cameras to an existing one.

Obseron 2 support

It will not be possible to purchase Obseron 2 licenses for new recorders after the release of version 3. Upgrade licenses can still be purchased. Version 2 will get important updates until the end of 2023.

Get ready!

Obseron 3 will be released on February 28th. Marketing material and price list will be provided before publication.
